## Background

---

The Indiana Office of Technology and Indiana Interactive, has been tasked with implementing a single sign-on authentication mechanism and Identity Provider for public online applications for the State of Indiana, referred to as Access Indiana. This project delivers a best practice solution for State Salesforce system administrators to configure an OpenID Connect (OIDC) authentication to work with Access Indiana.

## Core Workgroup

---

The core workgroup consisted of members of the Indiana Office of Technology.

Name	Role / Capacity
<b>Alvin Wilson</b>	Deputy Chief Administrative Officer
<b>Yancy Hollonquest</b>	Project Owner
<b>Bob Braun</b> , CRM Architect	Salesforce Configurator @ Relevant Technologies
<b>Casey Boyd</b> , CRM Architect/Developer	Salesforce Developer @ Relevant Technologies
<b>Sloane Wright</b>	General Manager @ Access Indiana

## How to Use This Document

---

This document is designed to be a roadmap for helping Application Development move toward the vision expressed by project stakeholders. It provides a description of the functional requirements for the changes being requested.

## Target Audience

---

This document is intended to assist Certified Salesforce Administrators and Developers in establishing OpenID Connect authentication with Access Indiana.

## Project Execution Steps

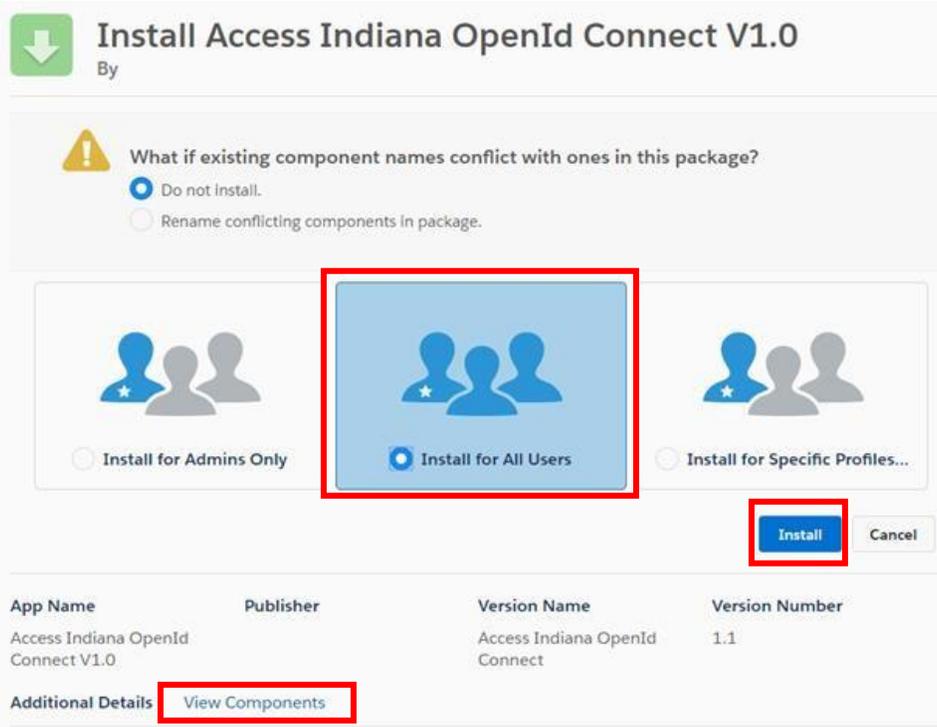

1. Install Access Indiana custom Auth. Provider in your Salesforce org
2. Initial configuration of Access Indiana custom Auth. Provider in your Salesforce org
3. Register an application with Access
4. Complete configuration of Access Indiana custom Auth. Provider in your Salesforce org
5. Set up Users
6. Test your app

## Install Access Indiana custom Auth. Provider in your Salesforce org

- An authentication provider allows users to log in to their Salesforce org using their login credentials from an external service provider. Salesforce provides authentication providers for apps that support the OpenID Connect protocol, such as Google, Facebook, Twitter, and LinkedIn. For apps that do not support OpenID Connect, Salesforce provides an Apex Auth.AuthProviderPluginClass abstract class to create a custom authentication provider.
- In this case, external service provider is Access Indiana. It is important that while Salesforce support the OpenID Connect protocol, at the time of this writing it does not support the Hybrid Flow (<https://success.salesforce.com/ideaView?id=0873A000000TtnAQAS>). Access Indiana Custom Auth. Provider leverages the Auth.AuthProviderPluginClass, thus we are able use the OpenID Connect Hybrid Flow as required by Access Indiana.
- Log into your Salesforce Organization, location to install the Access Indiana Custom Auth Provider. Salesforce org should have a “My Domain” subdomain. For help setting up a “My Domain” subdomain, please refer to this link: [https://help.salesforce.com/articleView?id=domain\\_name\\_overview.htm&type=5](https://help.salesforce.com/articleView?id=domain_name_overview.htm&type=5).
- With My Domain, you create a subdomain within the salesforce.com domain. For example, trailhead is a subdomain of the Salesforce domain: trailhead.salesforce.com. With a subdomain, you replace the instance URL that Salesforce assigned you, like

<https://na30.salesforce.com>, with your chosen domain name, such as <https://somethingcool.my.salesforce.com>.

- Access Indiana Custom Auth. Provider is delivered as a Salesforce unmanaged package. The package URL for this solution is: <https://test.salesforce.com/packaging/installPackage.apexp?p0=04t350000001Eob>
- After logging in to your Salesforce org, append [“/packaging/installPackage.apexp?p0=04t350000001Eob”](https://test.salesforce.com/packaging/installPackage.apexp?p0=04t350000001Eob) (no quotes) to your “My Domain” Salesforce URL. So, if your “My Domain” for your org is “ingovtech”, you would install the unmanaged package using this URL: <https://ingovtech.my.salesforce.com//packaging/installPackage.apexp?p0=04t350000001Eob>
- If you have not logged in, you will be redirected to do so. Once authenticated, select the “Install for All Users” button and then click the “Install” button. From here, you can also view the solution components by clicking the “View Components” link:

**Install Access Indiana OpenId Connect V1.0**

## Install Access Indiana OpenId Connect V1.0

By

Installing and granting access to all Users...

App Name	Publisher	Version Name	Version Number
Access Indiana OpenId Connect V1.0		Access Indiana OpenId Connect	1.1

**Additional Details** [View Components](#)

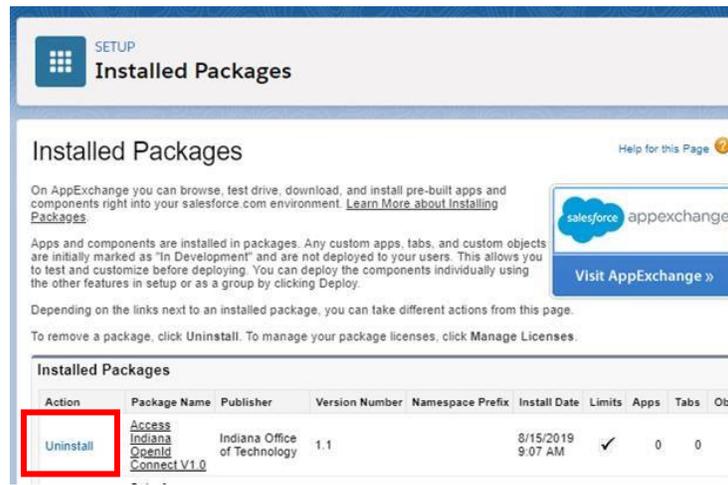

## Install Access Indiana OpenId Connect V1.0

By

Installation Complete!

App Name	Publisher	Version Name	Version Number
Access Indiana OpenId Connect V1.0		Access Indiana OpenId Connect	1.1

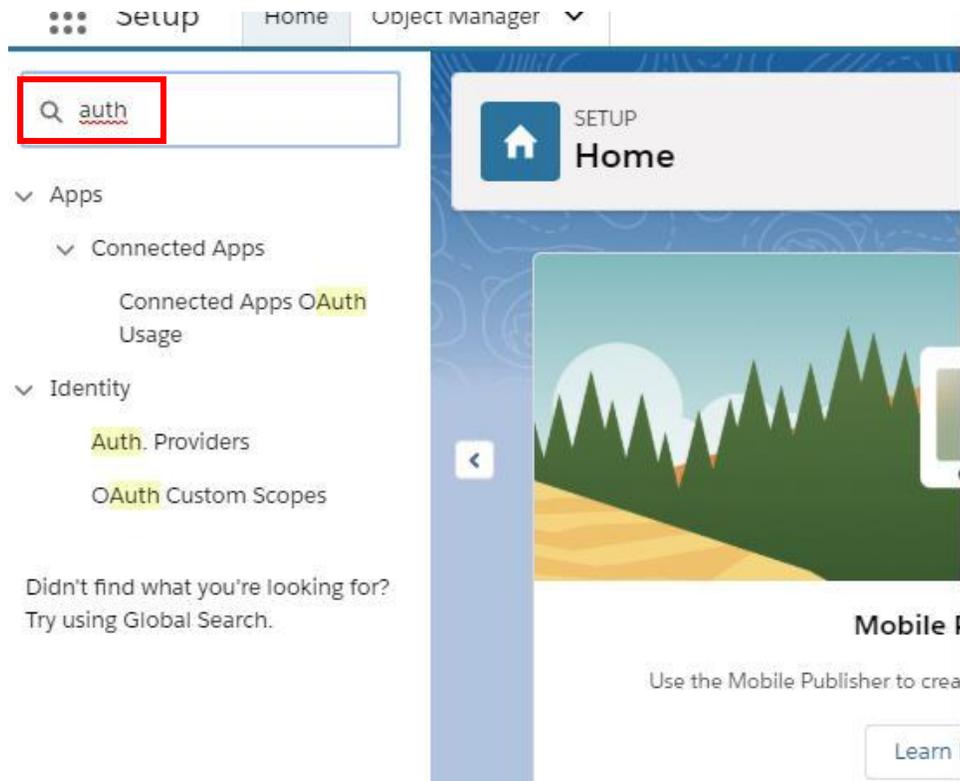

- If you ever want to uninstall this package, you would click the “Uninstall” link to do so.

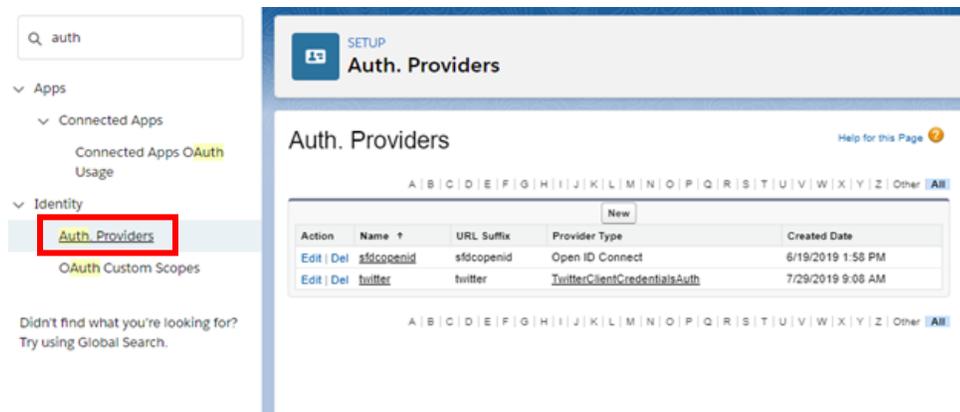

At this point, installation is complete.

## Initial configuration of Access Indiana custom Auth. Provider in your Salesforce org

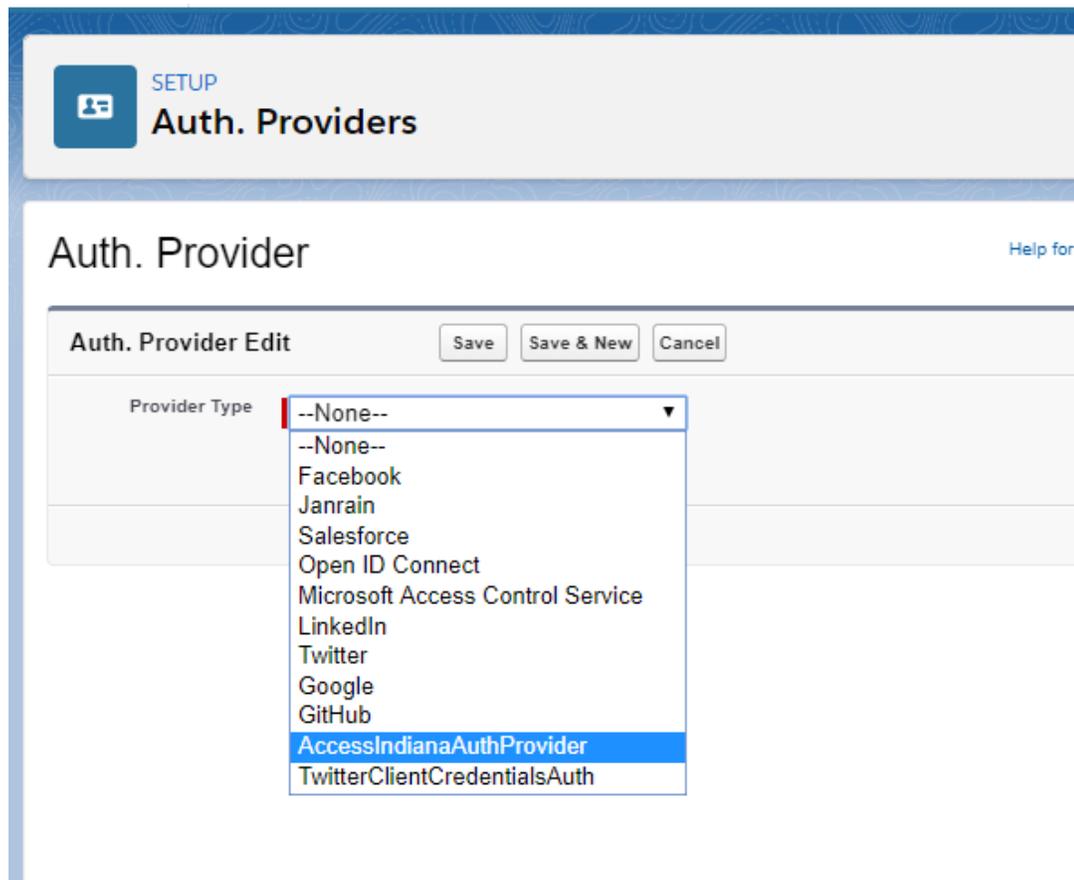

- In Setup, navigate to the Auth. Providers SETUP page by typing “auth” in the Setup “Quick Find” search field.

- Click to select Auth Providers.

- Click the “New” button and select the “AccessIndianaAuthProvider” from the Provider Type picklist.

- You will then be presented with the following page:

## Auth. Provider

**Auth. Provider Edit** Save Save & New Cancel

Provider Type: AccessIndianaAuthProvider

Name:

URL Suffix:

Authorization Endpoint:

Client Id:

Client Secret:

Redirect URI:

Scope:

Token Endpoint:

User Info Endpoint:

Custom Error URL:

Custom Logout URL:

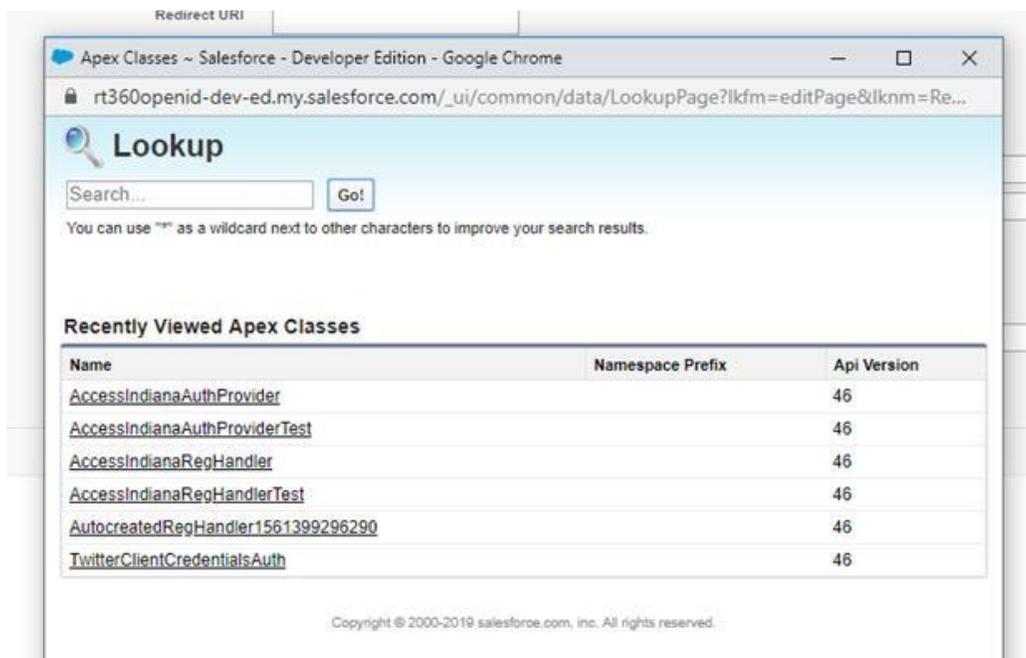

Registration Handler:  Automatically create a registration handler template

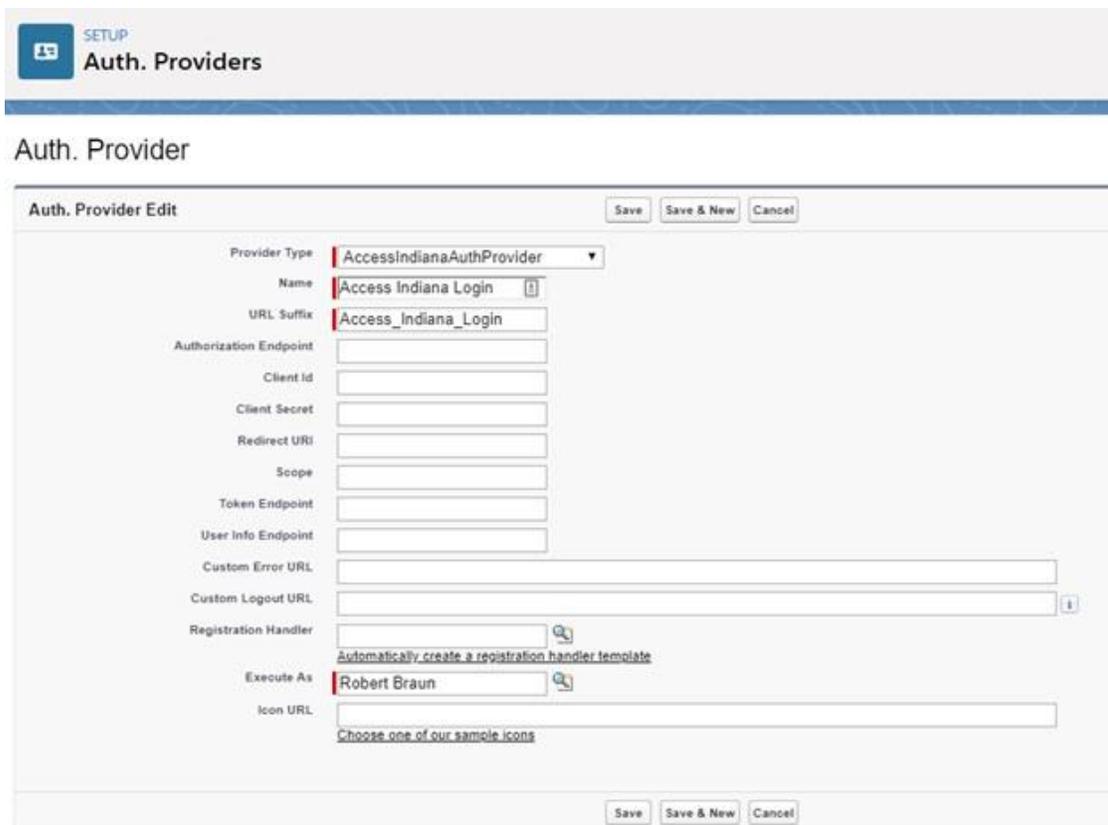

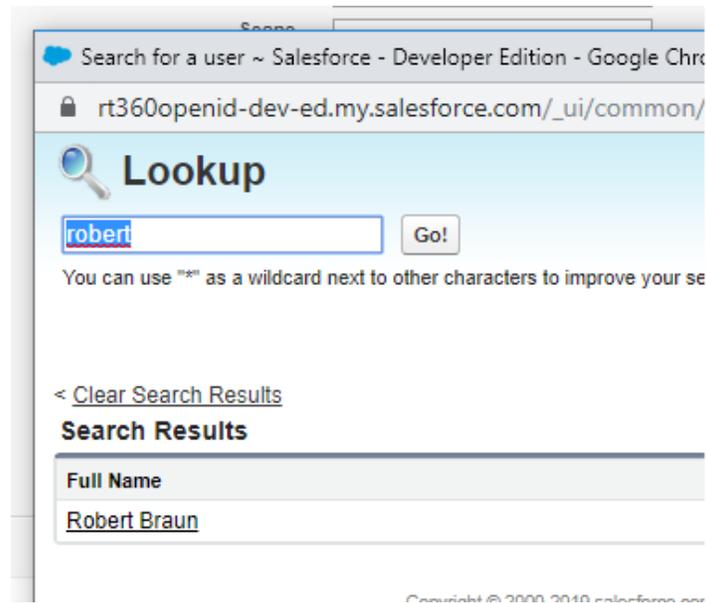

Execute As:

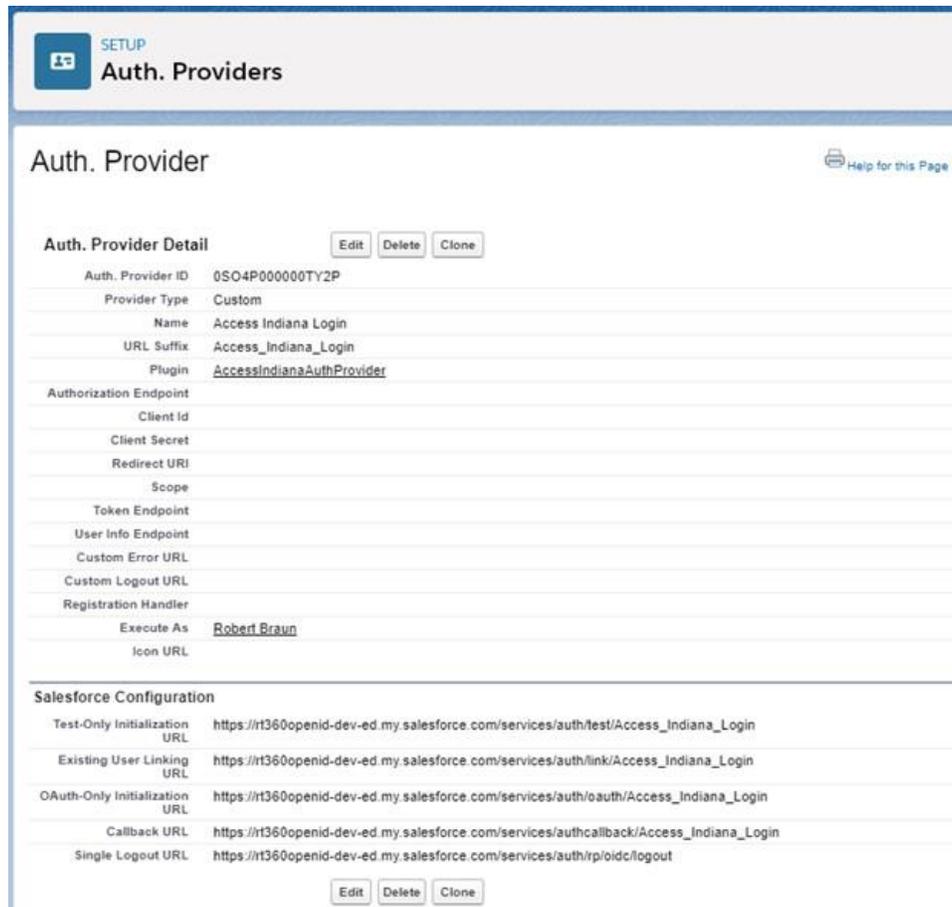

Icon URL:  Choose one of our sample icons

Save Save & New Cancel

- Type in the “Name”, “URL Suffix”, select a “Registration Handler”, select an “Execute As” User that will be used as the running user for this authentication.

Edit Delete Clone

- In a browser, enter the following URL to see the Access Indiana well-known endpoints: <https://accessintegrate.in.gov/.well-known/openid-configuration>. Notice the URLs for the “authorization\_endpoint”, “token\_endpoint”, and “userinfo\_endpoint”.

```
{
  "issuer": "https://accessintegrate.in.gov",
  "jwks_uri": "https://accessintegrate.in.gov/.well-known/openid-configuration/jwks",
  "authorization_endpoint": "https://accessintegrate.in.gov/connect/authorize",
  "token_endpoint": "https://accessintegrate.in.gov/connect/token",
  "userinfo_endpoint": "https://accessintegrate.in.gov/connect/userinfo",
  "end_session_endpoint": "https://accessintegrate.in.gov/connect/endsession",
  "check_session_iframe": "https://accessintegrate.in.gov/connect/checksession",
  "revocation_endpoint": "https://accessintegrate.in.gov/connect/revocation",
  "introspection_endpoint": "https://accessintegrate.in.gov/connect/introspect",
  "device_authorization_endpoint": "https://accessintegrate.in.gov/connect/deviceauthorization",
  "frontchannel_logout_supported": true,
  "frontchannel_logout_session_supported": true,
  "backchannel_logout_supported": true,
  "backchannel_logout_session_supported": true,
  "scopes_supported": [
    "openid",
    "profile",
    "email",
    "offline_access"
  ],
  "claims_supported": [
    "sub",
    "name",
    "family_name",
    "given_name",
    "middle_name",
    "updated_at",
    "email",
    "email_verified",
    "email_updated_at"
  ]
}
```

- Copy each of the URLs for the endpoints listed above and paste into the “Authorization Endpoint”, “Token Endpoint”, and “User Info Endpoint” fields, respectively. Your Auth. Provider should now look like below:

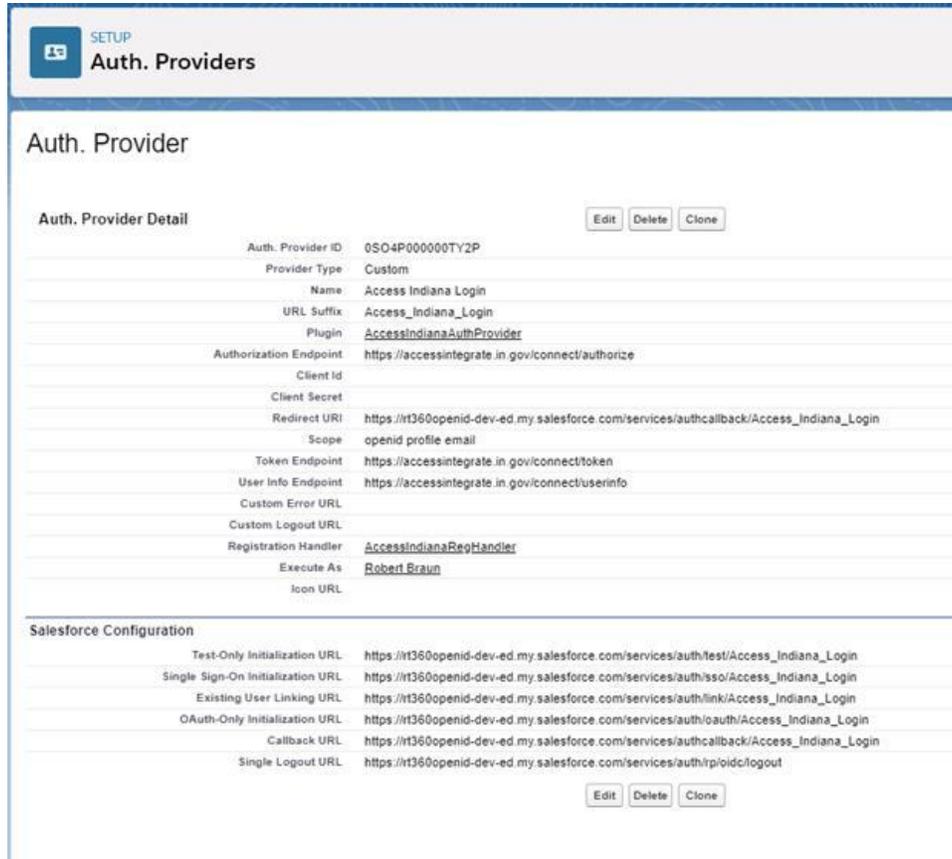

The screenshot shows the Salesforce 'Auth. Providers' setup page. The 'Auth. Provider Detail' section is expanded, showing the following configuration:

Field	Value
Auth. Provider ID	0SO4P00000TY2P
Provider Type	Custom
Name	Access Indiana Login
URL Suffix	Access_Indiana_Login
Plugin	AccessIndianaAuthProvider
Authorization Endpoint	https://accessintegrate.in.gov/connect/authorize
Client Id	
Client Secret	
Redirect URI	
Scope	
Token Endpoint	https://accessintegrate.in.gov/connect/token
User Info Endpoint	https://accessintegrate.in.gov/connect/userinfo
Custom Error URL	
Custom Logout URL	
Registration Handler	AccessIndianaRegHandler
Execute As	Robert Braun
Icon URL	

The 'Salesforce Configuration' section is also visible, listing various URLs for initialization and linking, all pointing to the Salesforce instance.

- Edit the Auth. Provider page again and enter “openid profile email” in the Scope field. Copy the Callback URL from the Salesforce Configuration section and copy it to the “Redirect URI” field. Your Auth. Provider should now look like this:

The screenshot shows the Salesforce 'Auth. Providers' setup page. The 'Auth. Provider Detail' section is expanded, showing the following configuration:

Auth. Provider Detail	
Auth. Provider ID	0SO4P000000TY2P
Provider Type	Custom
Name	Access Indiana Login
URL Suffix	Access_Indiana_Login
Plugin	AccessIndianaAuthProvider
Authorization Endpoint	https://accessintegrate.in.gov/connect/authorize
Client Id	
Client Secret	
Redirect URI	https://it360openid-dev-ed.my.salesforce.com/services/authcallback/Access_Indiana_Login
Scope	openid profile email
Token Endpoint	https://accessintegrate.in.gov/connect/token
User Info Endpoint	https://accessintegrate.in.gov/connect/userinfo
Custom Error URL	
Custom Logout URL	
Registration Handler	AccessIndianaRegHandler
Execute As	Robert Braun
Icon URL	

The 'Salesforce Configuration' section is also expanded, showing the following configuration:

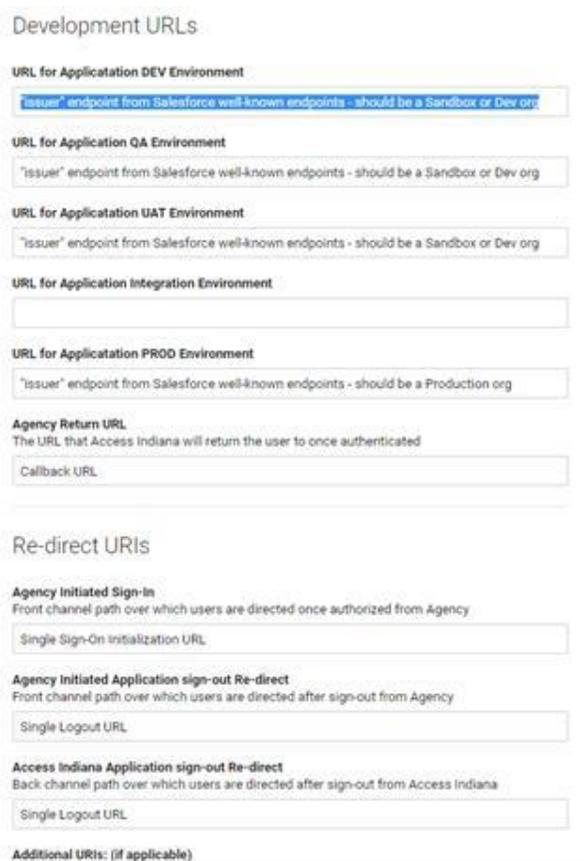

Salesforce Configuration	
Test-Only Initialization URL	https://it360openid-dev-ed.my.salesforce.com/services/auth/test/Access_Indiana_Login
Single Sign-On Initialization URL	https://it360openid-dev-ed.my.salesforce.com/services/auth/sso/Access_Indiana_Login
Existing User Linking URL	https://it360openid-dev-ed.my.salesforce.com/services/auth/link/Access_Indiana_Login
OAuth-Only Initialization URL	https://it360openid-dev-ed.my.salesforce.com/services/auth/oauth/Access_Indiana_Login
Callback URL	https://it360openid-dev-ed.my.salesforce.com/services/authcallback/Access_Indiana_Login
Single Logout URL	https://it360openid-dev-ed.my.salesforce.com/services/auth/oidc/logout

### Register an application with Access

- To register your client application with Access Indiana, submit the online form located: <https://app.smartsheet.com/b/form/472a5b71e31f455ebf14b39d9858f77b>
- Complete the Agency information in the top part of the form. The Salesforce URL information can be found either in the Auth. Provider you just created, or in the Salesforce well-known endpoints.
- Provide the requested URLs so Access Indiana can create an application (tile) in Access Indiana that will collaborate with your Auth. Provider. Once this is set up, you will receive notice from Access Indiana along with a unique client id and client secret.

- 
- Bring up a browser and navigate to your Salesforce org’s well-known endpoints.
- Here is an example segment for the ingovtech openid Sandbox well-known endpoints: <https://ingovtech--openid.cs33.my.salesforce.com/.well-known/openid-configuration>

```
{
  "end_session_endpoint": "https://ingovtech--OpenId.cs33.my.salesforce.com/services/auth/idp/oidc/logout",
  "frontchannel_logout_supported": true,
  "frontchannel_logout_session_supported": false,
  "issuer": "https://ingovtech--OpenId.cs33.my.salesforce.com",
  "authorization_endpoint": "https://ingovtech--OpenId.cs33.my.salesforce.com/services/oauth2/authorize",
  "token_endpoint": "https://ingovtech--OpenId.cs33.my.salesforce.com/services/oauth2/token",
  "revocation_endpoint": "https://ingovtech--OpenId.cs33.my.salesforce.com/services/oauth2/revoke",
  "userinfo_endpoint": "https://ingovtech--OpenId.cs33.my.salesforce.com/services/oauth2/userinfo",
  "jwks_uri": "https://ingovtech--OpenId.cs33.my.salesforce.com/id/keys",
  "registration_endpoint": "https://ingovtech--OpenId.cs33.my.salesforce.com/services/oauth2/register",
  "introspection_endpoint": "https://ingovtech--OpenId.cs33.my.salesforce.com/services/oauth2/introspect",
  "scopes_supported": [
    "openid"
  ]
}
```

The screenshot shows the 'Development URLs' section of a Salesforce OpenID Connect configuration page. It includes several input fields for different environments: DEV, QA, UAT, Integration, and PROD. The 'issuer' field for DEV, QA, and UAT environments is highlighted with a blue box and contains the text: 'issuer' endpoint from Salesforce well-known endpoints - should be a Sandbox or Dev org. Below this is the 'Agency Return URL' section with a 'Callback URL' field. The 'Re-direct URIs' section includes fields for 'Agency Initiated Sign-in' (Single Sign-On Initialization URL), 'Agency Initiated Application sign-out Re-direct' (Single Logout URL), and 'Access Indiana Application sign-out Re-direct' (Single Logout URL). There is also an 'Additional URIs: (if applicable)' field.

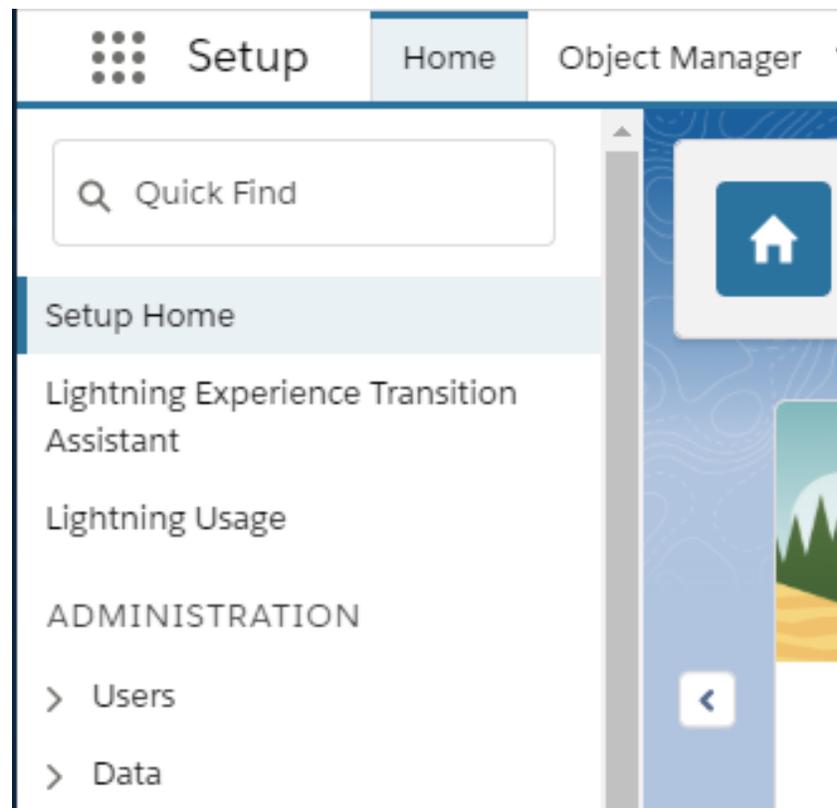

- Notice the “issuer” URL above. This is the URL for either the DEV, QA, UAT, or Integration environments. A Production org will not contain the Sandbox name in the “issuer” URL.
- The remaining URLs can be found in the Auth. Provider configuration you are setting up.
- For the “Agency Return URL” enter the “Callback URL”, e.g.: <https://rt360openid-deved.my.salesforce.com/services/authcallback/Access Indiana Login>

- For the “Agency Initiated Sign-In” Re-Direct URL, enter the “Single Sign-On Initialization URL”, e.g.: [https://rt360openid-dev-ed.my.salesforce.com/services/auth/sso/Access\\_Indiana\\_Login](https://rt360openid-dev-ed.my.salesforce.com/services/auth/sso/Access_Indiana_Login)
- For the “Agency Initiated Application sign-out Re-direct and “Access Indiana Application sign-out Re-direct” Re-direct URLs, enter the “Single Logout URL”, e.g.: <https://rt360openid-dev-ed.my.salesforce.com/services/auth/rp/oidc/logout>

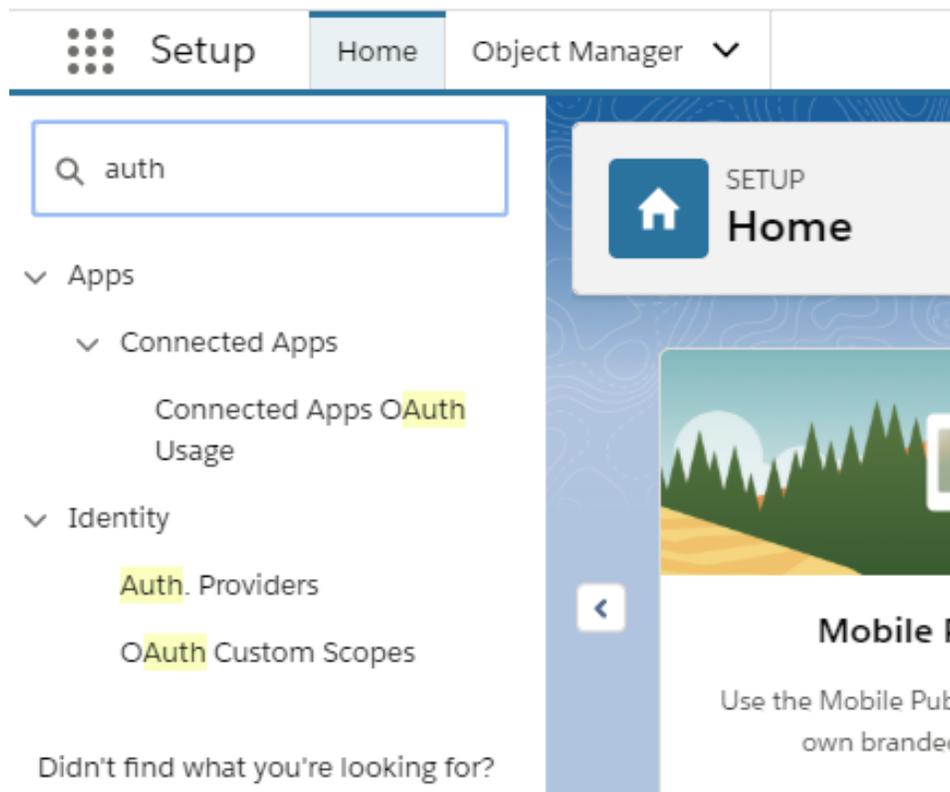

Submit the form and wait for your acknowledgement and client id and client secret.

### Final Configuration

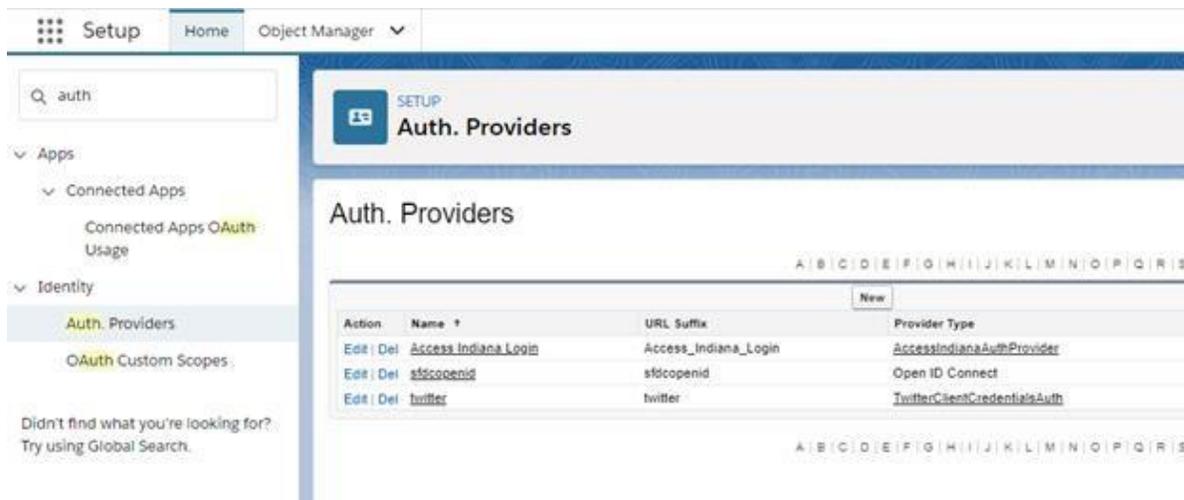

- Once you receive your client id and client secret from Access Indiana, you will need to update your Auth. Provider configuration in your Salesforce org.
- Log into your Salesforce org and go to Setup.

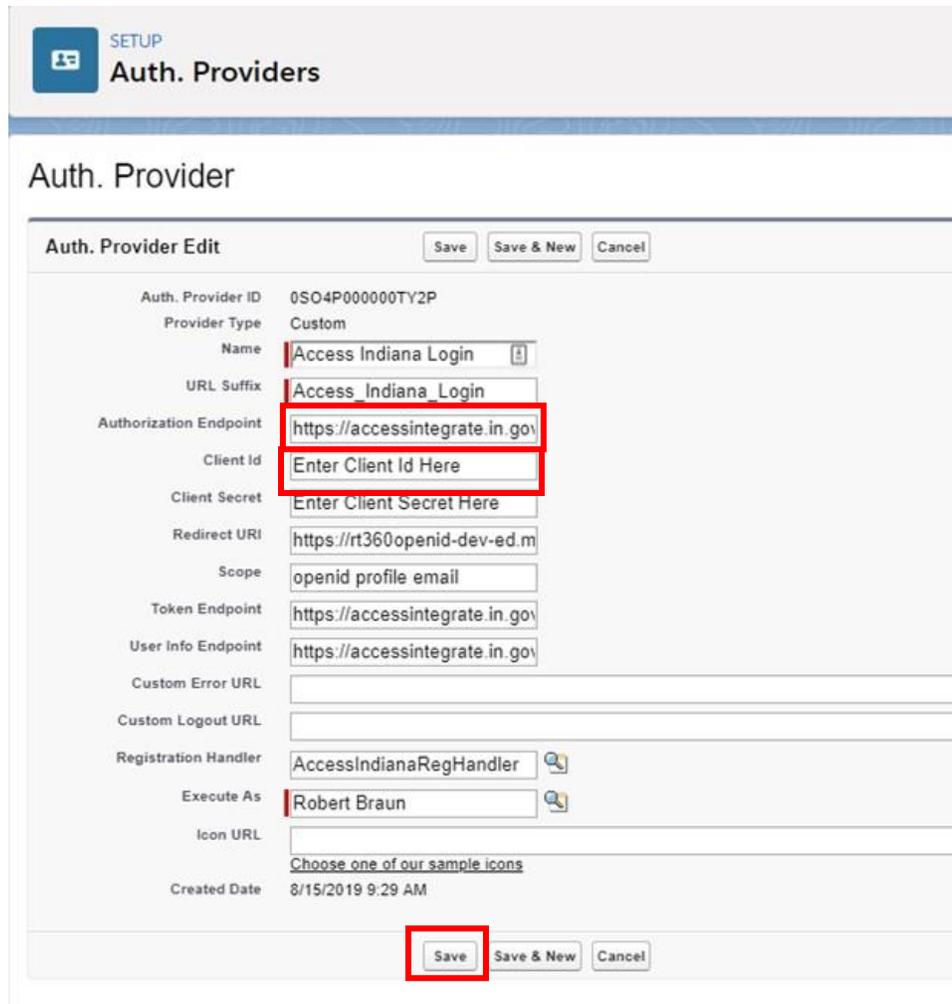

In the Quick Find search field, type “auth” and click the Auth. Providers link.

- You should now be at the SETUP Auth. Providers home page.

Edit your Auth. Provider to add the Client Id and Client Secret. Enter the Client Id and Client Secret values you received from Access Indiana into the Client Id and Client Secret fields, respectively. Save your configuration by clicking the Save button at the bottom of the page.

SETUP  
Auth. Providers

### Auth. Provider

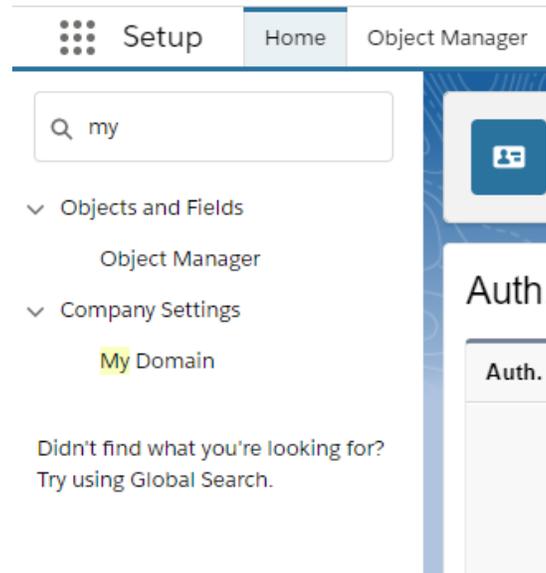

Auth. Provider Edit Save Save & New Cancel

Save Save & New Cancel

- At this point, your Access Indiana custom Auth. Provider is fully configured. Now, we need to make sure Users can access this authentication. To do this, we add the Auth. Provider you just created to the sign-in page as a button.

Type “my” in the Setup Quick Find field and select the “My Domain” link.

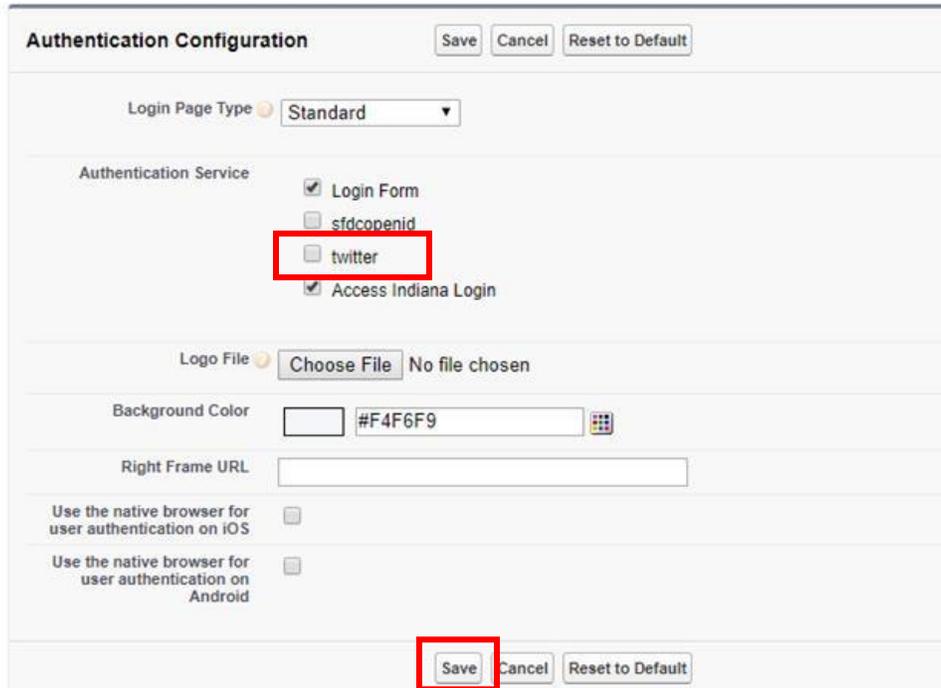

- This navigates you to the My Domain SETUP home page.

- Notice the “Authentication Configuration” section. Click the Edit button for this section. You will see an Authentication Service for the “Access Indiana Login” Auth. Provider you just created. Check the checkbox next to it to add that button to the login page.

- Click the Save button at the bottom of the page to save this configuration.

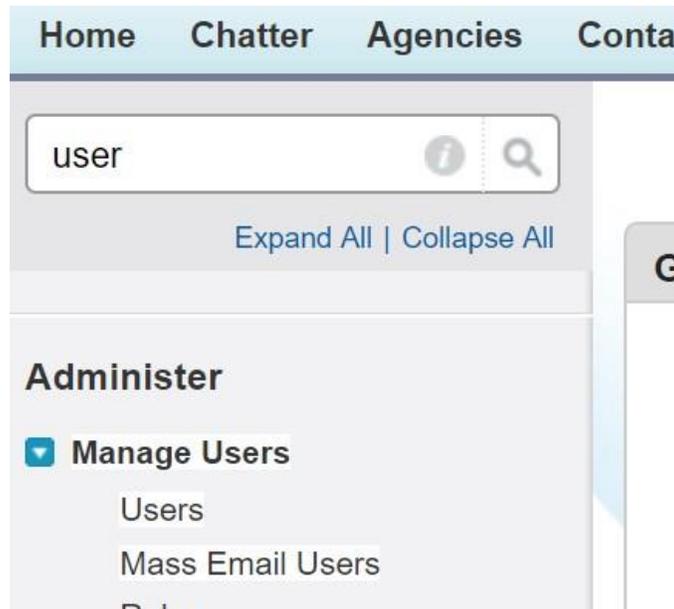

## Authentication Configuration

The screenshot shows the 'Authentication Configuration' form. At the top, there are buttons for 'Save', 'Cancel', and 'Reset to Default'. The form contains several sections: 'Login Page Type' with a dropdown menu set to 'Standard'; 'Authentication Service' with checkboxes for 'Login Form' (checked), 'sfdcopenid' (unchecked), 'twitter' (unchecked and highlighted with a red box), and 'Access Indiana Login' (checked); 'Logo File' with a 'Choose File' button and 'No file chosen' text; 'Background Color' with a color picker set to '#F4F6F9'; 'Right Frame URL' with an empty text input field; and two checkboxes for 'Use the native browser for user authentication on iOS' and 'Use the native browser for user authentication on Android', both of which are unchecked. At the bottom of the form, there are buttons for 'Save', 'Cancel', and 'Reset to Default', with the 'Save' button highlighted by a red box.

## Set up a User

- In the Setup Quick Find field, type “user”.

- Click the Users link to go to the All Users page.
- Either create a new User or edit an existing User. In this example, I am editing the Braun, Bob User by clicking the Edit link.

## All Users

On this page you can create, view, and manage users.

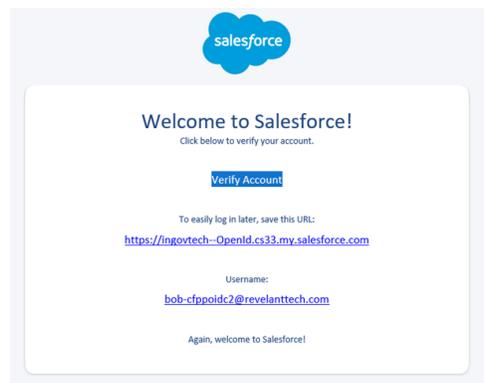

In addition, download SalesforceA to view and edit user details, reset passwords, and perf

- Scroll down in the edit page to the “Additional Information” section. Enter the “Access Indiana Email” into the Access Indiana Email field.

Single Sign On Information	
Federation ID	<input type="text"/>
Additional Information	
Access Indiana Subject	<input type="text"/>
Access Indiana Email	<input type="text" value="bob.braun@revelanttech.co"/>

- Your User should receive an email from support@salesforce.com with a link to “Verify your account”.

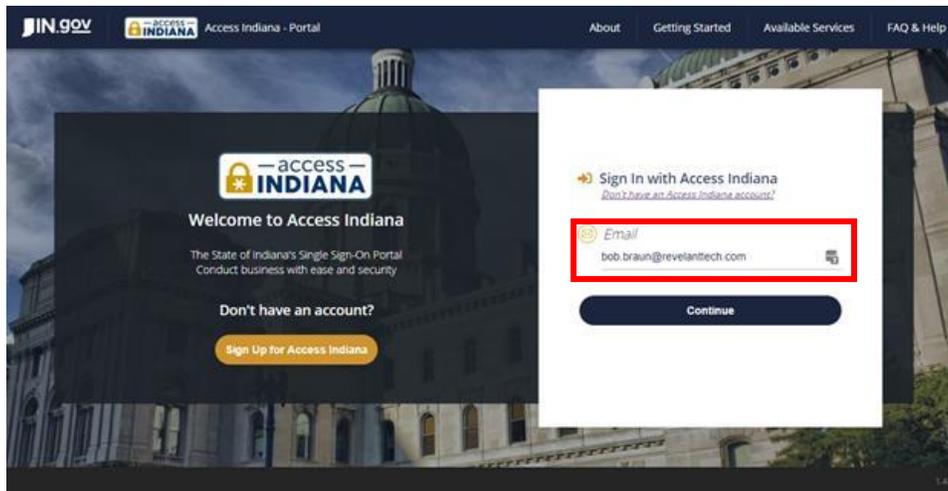

- Once the user has clicked on the Verify Account link, the user is now ready to log in via Access Indiana.

## Test Your App

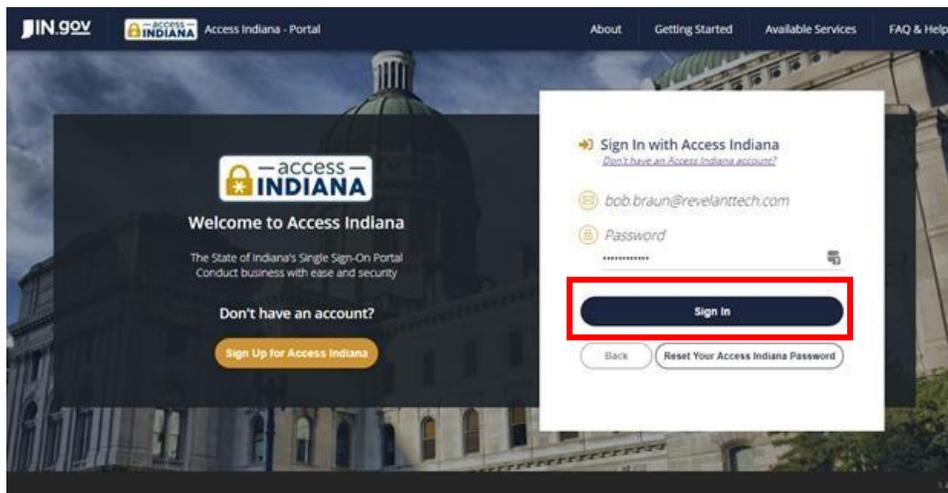

To test your application, log in to Access Indiana. In a browser, enter this

URL: <https://accessintegrate.in.gov>

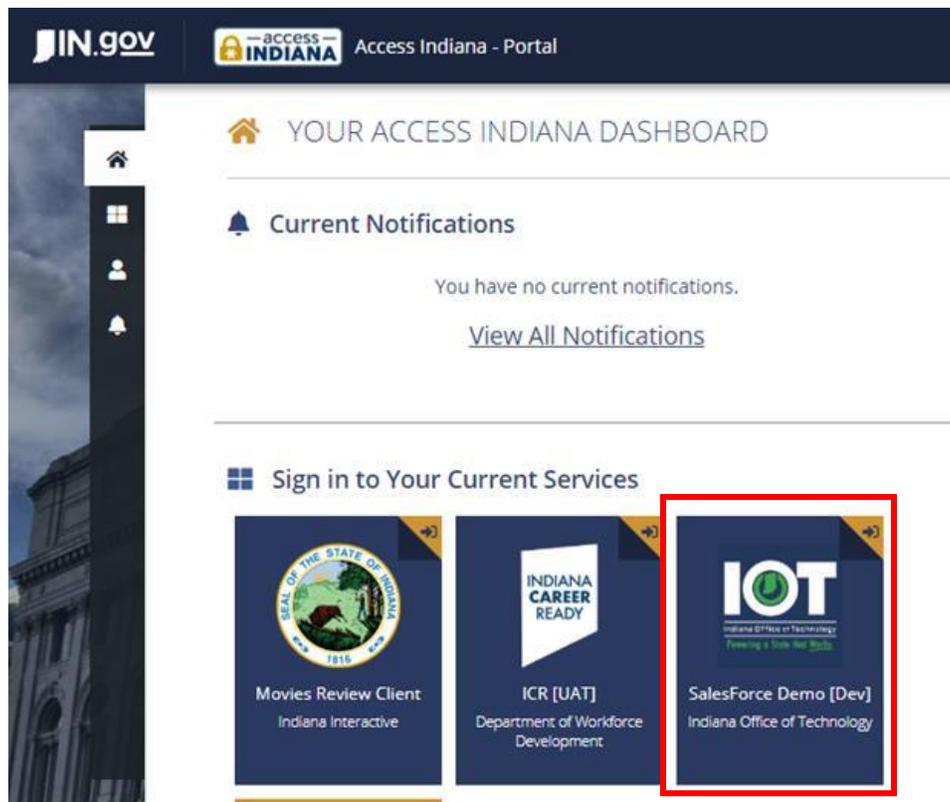

- Enter your Access Indiana Email address and click Continue (or click the “Don’t have an Access Indiana account?” link to create an account.)

- Enter your Access Indiana Password and click the Sign In button.

- You are now in the Access Indiana – Portal.

- Find the tile for your Access Indiana application. In this example, it is the IOT Salesforce Demo [Dev] tile. Click that tile to log into your Salesforce org.

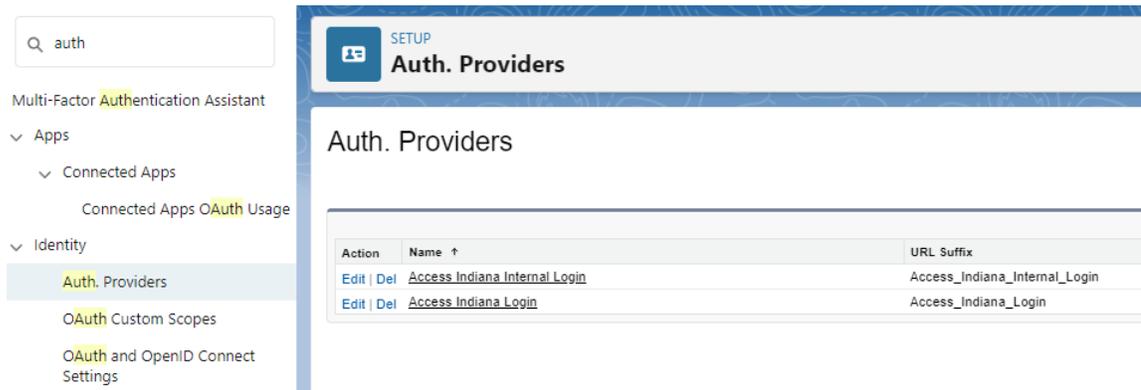

## Sandbox Creation/Refresh Configuration

Once your sandbox is ready for use updates will be required in SFDC for Auth Providers and Remote Site Settings to leverage Access Integrate, <https://accessintegrate.in.gov/>, for the sandbox environment. If the environment was previously configured with Access Integrate the Client ID and Secret can be re-used without engaging with Access Indiana as outlined in ‘Register an application with Access’ section above.

For Sandbox instances that have been configured with Access Integrate the Client ID and Client Secret should be stored securely by the Administrator Staff or values should be copied prior to starting refresh process for later configuration.

## Auth Providers

- In the SFDC Setup menu search for Auth. Providers. Which should reference ‘Access Indiana Internal Login’ for internal staff access and ‘Access Indiana Login’ for external users accessing the new PSP Portal Site.

The screenshot shows the Salesforce Setup interface. On the left, a navigation menu is visible with 'Auth. Providers' selected under the 'Identity' section. The main content area displays the 'Auth. Providers' configuration page. At the top, there is a search bar containing 'auth'. Below the search bar, the page title is 'Auth. Providers'. A table lists the configured providers:

Action	Name ↑	URL Suffix
<a href="#">Edit</a>   <a href="#">Del</a>	<a href="#">Access Indiana Internal Login</a>	Access_Indiana_Internal_Login
<a href="#">Edit</a>   <a href="#">Del</a>	<a href="#">Access Indiana Login</a>	Access_Indiana_Login

- \*\*\*Skip step unless working with Full copy sandbox ‘UAT’  
If working with the full copy sandbox ‘UAT’ the name and URL Suffix for ‘Access Indiana Login’ should be updated to reflect ‘Access Indiana Permits’ to align the configuration with Access Integrate.

### Auth. Provider Edit

Auth. Provider ID	0SO8z000000000a
Provider Type	Custom
Name	<input type="text" value="Access Indiana Permits"/>
URL Suffix	<input type="text" value="Access_Indiana_Permits"/>

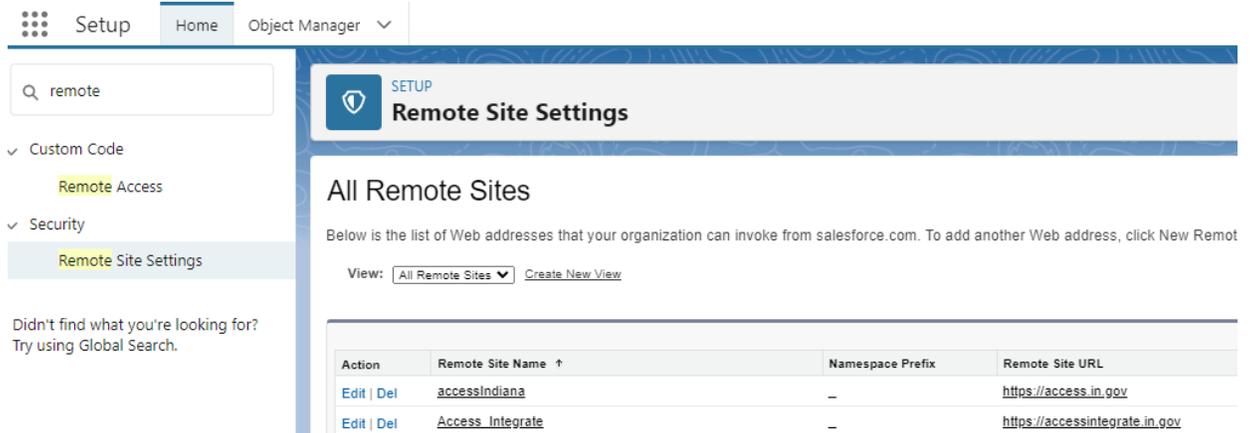

- For the selected Auth Provider update Endpoints referencing access.in.gov to accessintegrate.in.gov and the Redirect URL based on the Auth Provider configuration. Covered in detail in earlier section 'Initial configuration of Access Indiana custom Auth. Provider in your Salesforce org'.
- Update the Client ID and Client Secret from the retained values from Access Integrate.
- Auth Provider configured for accessintegrate.in.gov should look similar to this.

### Auth. Provider Detail

Auth. Provider ID	0SO8z000000000a
Provider Type	Custom
Name	Access Indiana Permits
URL Suffix	Access_Indiana_Permits
Plugin	<a href="#">AccessIndianaAuthProvider</a>
Authorization Endpoint	https://accessintegrate.in.gov/connect/authorize
Client Id	
Client Secret	
Redirect URI	https://dhs.govcloud--uat.sandbox.my.site.com/permits/services/authcallback/Access_Indiana_Permits
Scope	openid profile email
Token Endpoint	https://accessintegrate.in.gov/connect/token
User Info Endpoint	https://accessintegrate.in.gov/connect/userinfo
Custom Error URL	
Custom Logout URL	
Registration Handler	<a href="#">AccessIndianaRegHandlerPortal</a>
Execute As	<a href="#">Bob Braun</a>
Icon URL	

## Remote Site Settings

- In Setup search for Remote Site Settings

The screenshot shows the Salesforce Setup interface. The left sidebar contains a search bar with 'remote' entered and a navigation menu with 'Remote Site Settings' selected. The main content area is titled 'Remote Site Settings' and displays a table of 'All Remote Sites'. The table has four columns: Action, Remote Site Name, Namespace Prefix, and Remote Site URL. Two entries are visible: 'accessIndiana' and 'Access\_Integrate'.

Action	Remote Site Name ↑	Namespace Prefix	Remote Site URL
<a href="#">Edit</a>   <a href="#">Del</a>	accessIndiana	-	<a href="https://access.in.gov">https://access.in.gov</a>
<a href="#">Edit</a>   <a href="#">Del</a>	Access_Integrate	-	<a href="https://accessintegrate.in.gov">https://accessintegrate.in.gov</a>

- Locate the Remote Site Name accessIndiana and delete this record. Doing this will help stop a sandbox from inadvertently accessing Production.
- Then create a new Remote Site entry. Remote Site URL should equal <https://accessintegrate.in.gov>. The Remote Site Name is only used in reference within the UI for users. This allows for external access of Access Integrate/Access Indiana.
